PROFESSIONAL EXPERIENCE

Clinetic
Durham, NC
Full Stack Software Engineer   *March 2021 – June 2024*
- Developed scalable, secure clinical data software on frontend and backend using Angular, React, and Java with Spring
- Translated product business requirements and Designer Figma mockups into intuitive and effective user interfaces
- Utilized microservice architecture on Kubernetes with Kafka event-based service communication on AWS servers
- Managed complex healthcare regulatory requirements to maintain data security on frontend and backend
- Worked with senior stakeholders to find consensus on technical direction in ambiguous problem areas

Harvested Financial
Remote (Company based in Chicago, IL)
Senior Software Engineer   *June 2020 – March 2021*
- Created software platform to deliver automated, parameterizable options strategies to individual and business clients
- Engaged in full stack development using Python and Django on backend and Angular with Bootstrap on frontend
- Wore wide variety of "hats" in early-stage startup environment while consistently growing user base and assets
- Integrated with third-party custodian as SEC Registered Investment Advisor to onboard clients and transfer assets
- Implemented compliant cybersecurity practices across client and server for heavily regulated financial firm

Galatea Associates
Somerville, MA & Durham, NC
Associate (Software Engineer)   *April 2018 – June 2020*
- Designed, developed, and tested software for global investment banking and broker dealer clients
- Used Java with Spring, Angular, and mainframe language NATURAL in project-based engagements
- Acted as technology agnostic consultant solving complex financial industry problems through software
- Wrote scalable, efficient code pertaining to management of international custody and inventory optimization
- Combined consulting skills with technical acumen to understand business needs and implement performant solutions

EDUCATION

UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL   **Chapel Hill, NC**
BA - Exercise and Sport Science, Entrepreneurship, May 2014

PROJECTS

yNot: Will help our team decide where to go eat lunch. Provides restaurant and bar suggestions in your area and allows for list creation and sharing. Built with Ionic, Capacitor, Firebase, and Kotlin Spring boot. Available on web, iOS and Android. Marketing website ynot.io created with React using Next.js.
Fridge Cleaner: Find recipes based on the ingredients left in your fridge. Built with JavaScript/HTML/CSS, Edamam API.
